List of Contents

Volume 10 Number 1/2 **1993**

The 5th International Conference on the Manufacturing Science and Technology of the Future

H. KALS	1	Preface
F. M. PANDOLFI	3	Production engineering and information technology in the scope of the Third Framework Programme for research and technological development
P. MAC CONAILL	9	Overview of CIM activities in the European Community
F. JOVANE	13	Results of the Eureka FAMOS research programme: a European contribution to manufacturing technology
E. AGERMAN	21	Aspects of computer support of engineering processes
P. VEERKAMP and P. TEN HAGEN	33	Qualitative reasoning about design objects
E. ARAI and K. IWATA	41	CAD system with product assembly/disassembly planning function
K. KIKKAWA, H. SUZUKI, H. ANDO and F. KIMURA	49	A product modeling system for top-down design of machine assembly with kinematic motion
J. C. M. VAN DEN MOLENGRAAF, H. H. VAN MAL and J. WIJNIA	57	Selection procedures for manufacturing processes for design engineers
W. EVERSHEIM and J. SCHNEEWIND	65	Computer-aided process planning — state of the art and future development
A. BERNARD	71	The feature approach for the integrated design and machining of forming dies
H. HOLM, H. P. BØSS, H. PETURSSON and J. A. NIELSEN	77	Information system structure for a task level robot assembly language for on-line program generation
A. LENDERINK and H. J. J. KALS	89	The integration of process planning and machine loading in small batch part manufacturing
H.-P. WIENDAHL	99	Production planning and control — the tool to ensure logistical quality
J. SLOMP and W. H. M. ZIJM	109	A manufacturing planning and control system for a flexible manufacturing system
D. GENDREAU, J. J. LESAGE and G. TIMON	115	An integration of production management rules and fabrication know-how for real-time cell production control

J. J. TIEMERSMA, W. CURTIS and H. J. J. KALS — 123 Communication and control in small batch part manufacturing

H. M. BÖHMS and F. P. TOLMAN — 131 A methodology for expressing CIM reference architectures

J.-F. COUTURIER, J. RICHARD and M. VERON — 141 Control loop architecture and information system of a flexible manufacturing cell

P. GU and A. MONID — 147 Design of cellular manufacturing systems — an industrial case study

I Software Survey Section

Volume 10 Number 3 **June 1993**

C. M. WU, B. C. JIANG and C. H. WU — 153 Using neural networks for robot positioning control

Y. C. YU, C. R. LIU and R. L. KASHYAP — 169 ED-DESIGN: an engineering drawing based design model for computer understanding

J.-H. CHIN and H.-C. TSAI — 185 A path algorithm for robotic machining

Y. H. A. LIOU, P. P. LIN, R. R. LINDEKE and H. D. CHIANG — 199 Tolerance specification of robot kinematic parameters using an experimental design technique — the Taguchi method

A. SHARON, N. HOGAN and D. E. HARDT — 209 The macro/micro manipulator: an improved architecture for robot control

M. J. CARDEW-HALL, T. LABANS, G. WEST and P. DENCH — 223 A method of representing dimensions and tolerances on solid based freeform surfaces

H. CHU and H. A. ELMARAGHY — 235 Integration of task planning and motion control in a multi-robot assembly workcell

I Software Survey Section

Volume 10 Number 4 **August 1993**

E. C. De Meter — 257 Restraint analysis of assembly work carriers

G.-S. Liang and M.-J. J. Wang — 267 A fuzzy multi-criteria decision-making approach for robot selection

O. R. Williams, J. Angeles and F. Bulca — 275 Design philosophy of an isotropic six-axis serial manipulator

H. Zhuang, L. K. Wang and Z. S. Roth — 287 Error-model-based robot calibration using a modified CPC model

Y. L. Yao, M. H. Korayem and A. Basu — 301 Maximum allowable load of flexible manipulators for given dynamic trajectory

S. Motavalli and B. Bahr — 311 Automated tool monitoring system using vision system for a robotic cell

321 Announcement

i New Patents

I Software Survey Section

Volume 10 Number 5 **October 1993**

Y. F. Li — 323 Robot end-effector orientation control using proximity sensors

Wang Yangsheng and C. Malcolm — 333 Recognition and localization of a cubically modular part with laser-stripe-based range data

J. Y. H. Fuh, C.-H. Chang and M. A. Melkanoff — 339 An integrated fixture planning and analysis system for machining processes

J. H. Park and M. J. Chung — 355 Automatic generation of assembly sequences for multi-robot workcell

J. E. Colgate, H. Matsumoto and W. Wannasuphoprasit — 365 Linear electrostatic actuators: gap maintenance via fluid bearings

C. T. Mosier, R. A. Ruben and L. R. Talluru — 377 Group technology classification and coding system design: considerations and extension to robotic end-of-arm-tooling

I Software Survey Section

Volume 10 Number 6 **December 1993**

Intelligence in Robotic and Manufacturing Systems

M. JAMSHIDI — 391 Editorial

R. CARELLI and V. MUT — 393 Adaptive motion–force control of robots with uncertain constraints

H. ZHUANG, Z. S. ROTH, X. XU and K. WANG — 401 Camera calibration issues in robot calibration with eye-on-hand configuration

E. MESSINA and A. SCIOMACHEN — 413 Evaluation of resource allocation policies in a production line using Petri nets

K. S. TSO and P. G. BACKES — 423 A fail-safe tele-autonomous robotic system for nuclear facilities

M. J. RICHARD, I. BINDZI and C. M. GOSSELIN — 429 Dynamic analysis of manipulators by the vector-network method

P. M. LAROCHELLE, J. M. MCCARTHY and J. E. BOBROW — 437 Determining maximum payloads for cooperating robots under time-optimal control

FEI-YUE WANG, P. J. A. LEVER and B. PU — 445 A robotic vision system for object identification and manipulation using synergetic pattern recognition

ROBOTICS AND COMPUTER-INTEGRATED MANUFACTURING

AIMS AND SCOPE

Robotics and Computer-Integrated Manufacturing is a refereed international journal whose emphasis is on disseminating research which addresses or contains potential practical applications in manufacturing. The journal publishes original papers on theoretical, experimental, and applied research in robotics, rapid-response manufacturing, flexible automation, computer-controlled machinery and processes, and other areas that involve unique manufacturing techniques. Our goal is to help expand the knowledge base and state of the art in these areas by presenting scholarly works which employ innovative concepts or novel applications of existing concepts.

INFORMATION FOR CONTRIBUTORS

Submission of Manuscripts

Manuscripts (*the original plus 3 copies*) should be typed double-spaced on one side of the paper and mailed to the Associate Editor:

Dr Andre Sharon, Associate Editor
Laboratory for Manufacturing & Productivity
Massachusetts Institute of Technology
77 Massachusetts Ave, 35-237
Cambridge, MA 02139-4307
USA
Tel. (617) 258-5621
Fax (617) 253-2249
E-mail damien@mit.edu

Copyright and Originality

It is a condition of publication that manuscripts submitted to this journal have not been published and will not be simultaneously submitted or published elsewhere. All authors must sign the Transfer of Copyright Agreement, available from the editors, before the article can be published. (U.S. Government officers or employees whose submitted work was prepared as part of their employment are exempt from the transfer agreement, but must certify their status as government writers.) This transfer agreement enables Pergamon Press to protect the copyrighted material for the authors, but does not relinquish the authors' proprietary rights or rights to use their work as they please in the future. The copyright transfer covers the exclusive rights to reproduce and distribute the article, including reprints, photographic reproductions, microform or any other similar reproductions of similar nature and translations.

Nomenclature

All mathematical symbols and Greek letters may be either handwritten or typewritten, with identification provided in the margin. Distinction should be made between capital and lower case letters; between the letter O and zero; between the letter I, the number 1, and prime; between k and kappa. Mathematical expressions should be formatted in a column width of 55 characters. Mathematical expressions will be typeset exactly flush with the right margin.

References

References should be typed *triple-spaced, arranged alphabetically and numbered consecutively on a separate sheet*. Journal references should be given in the following order: author, article title (with subtitle, if any), journal abbreviation, volume number in Arabic numerals, inclusive pages and year. If the paper has been seen only in abstract, this should be indicated at the end of the original reference by the addition of the abbreviation (Abstr.), followed by the name, volume, pages and year of the abstract journal. The order for book references is as follows: author, title, volume (if more than one), edition number (if other than the first), city, publisher and year. If the reference is a chapter in a book, the order changes as follows: author of the chapter, title of the chapter, "In," book title, volume, edition, editors, city, publisher, year, and inclusive pages of the chapter. See the following examples:

Journal Article: Jones, C.B., Smith, A.L., Brown, P.D.: Article title. *Journal Name* 15:41–48, 1979.

Books: Brown, G.L.: A chapter. In *Book*, Vol. 1, 2nd edition, Carter, M.L. (Ed.). Oxford, Pergamon Press. 1981, pp. 14–29.

References should be referred to by numbers in the text, and be listed in alphabetical order. Authors are responsible for bibliographic accuracy and must check every reference in the manuscript and proofread again in page proof.

Tables

Should be numbered consecutively with Arabic numbers in order of their appearance in the text. Type each table double-spaced on a separate sheet. Do not use vertical rules. Supply a short descriptive title above the table.

Figures

Must be camera-ready. Line drawings should be done with blank India ink on heavy white paper. Halftones should be submitted as glossy prints. Authors will be charged for color reproductions. Each figure should be clearly identified on the back with the author's name(s) and figure number. The top of the figure should also be labelled. Artwork will be returned to the author after publication.

Proofs

Unless otherwise specified, page proofs will be sent to the first-named author for correction. Proofs should be returned within 48 hours of receipt. Any alterations not of a typographical nature may be charged to the author.

Reprints

Can be ordered on a Reprint Order Form which will accompany the proofs. Unless instructions to the contrary have been received, only the first-named author will receive this form. The author filling in the form should make sure that all co-authors' needs for reprints are incorporated in the total order. Reprint Order Forms must be received before printing in order to qualify for lower prepublication rates.
